

San Francisco State University

CSC 648 - 848

Milestone 0 Submission Form

Section 06 Team 02

September 15, 2026

Github repo name

SFSU-csc648-06-Fall26-team02

<https://github.com/ezerenm/SFSU-csc648-06-Fall26-team02>

Team About page name

<https://sfsu-csc648-06-fall26-team02.vercel.app/about>

Underlying Technology

Below is a list of the technologies used in the team's software stack:

Layer	Technology
Cloud/Hosting Platform	Vercel (Hobby tier, free)
Operating System	N/A (managed serverless platform, no VM)
Database	Supabase PostgreSQL 17
Front-end Framework	React 19 via Next.js 16 (App Router), Tailwind CSS
Back-end Language	JavaScript / TypeScript on Node.js 22
Back-end Framework	Next.js API routes
Authentication	Supabase Auth
Additional Technologies	Google Gemini API, GitHub (dev/feature branch workflow)
IDE	Visual Studio Code

How to access cloud/hosting platform

Item	Credentials / Access
Website URL	https://sfsu-csc648-06-fall26-team02.vercel.app About page: https://sfsu-csc648-06-fall26-team02.vercel.app/about API check: https://sfsu-csc648-06-fall26-team02.vercel.app/api/team
Cloud VM instance	No VM is used. The app is hosted on Vercel (managed platform), auto-deployed from the main branch of the GitHub repo. Deployment history is visible in the repo under Deployments. Vercel project access can be granted on request.
Database URL	Supabase organization: csc648-team02 (project csc648-team02, West US). TA jaredaungfr@gmail.com: invite accepted, has Administrator access. Instructor hjsonghjsong@gmail.com: invite sent 9/15. Tables: users, team_members (Row Level Security enabled). Schema: app/backend/schema.sql.

Study Plan

Member's familiarity with each technology on a scale of 1 to 5 (5 = very familiar, 1 = never used it).
Supabase covers database and auth; Google Cloud refers to its text extraction service.

Name	Role	React / Next.js	Node / API routes	Supabase	Gemini API	Google Cloud	Niantic Spatial	Git / GitHub
Daksh Kumar	Team Lead	5	5	5	5	4	3	5
Sumit Kumar	AI Master	3	4	3	4	2	2	4
Calvin Mei	Front-end Lead	3	3	1	1	1	1	3
Noah Bran	Back-end Lead	3	4	4	4	4	1	4
Tyler Duong	Scrum Master	2	2	2	2	2	2	4
Ezeren Masangcay	GitHub Master	3	3	2	3	1	1	4

Based on team members' familiarity, we set up the following study plan. Owners are assigned by role and paired with a supporting member so knowledge is not concentrated in one person.

Technology	Who (leader)	Who (support)	Expected goal (next 4 weeks)	By when
Google Cloud text extraction / Niantic Spatial	Daksh Kumar	Sumit Kumar	Feasibility test on both, since familiarity is lowest here: extract text from a sample document, and render a Scaniverse scan in a deployed page. Result decides which the project uses	Sept 19
Git / GitHub workflow	Ezeren Masangcay	Whole team	Pull request review workflow in use, GitHub Actions running lint and typecheck on every PR	Sept 22
Supabase (Postgres + Auth)	Noah Bran	Tyler Duong, Calvin Mei	Supabase Auth login with protected routes, row-level security, and sessions persisting across reloads	Sept 22
Node / Next.js API routes	Noah Bran	Ezeren Masangcay	Full CRUD API for the User and Profile entities with input validation and proper error handling	Sept 29
React / Next.js	Calvin Mei	Daksh Kumar	Shared layout and a reusable component set for the main app, plus routing between authenticated pages	Oct 6
Gemini API	Sumit Kumar	Tyler Duong	Endpoint returning structured JSON from Gemini, with input validation and a malformed-input test case	Oct 6
